

Dear Customer

Thank you for purchasing Lopolight's unique interior/deck light.

Lopolights are based on innovative use of LED's (Light Emitting Diodes). Compared to normal incandescent navigation lights the Lopolight products are extremely tough, has a very long life (50.000 hours) and consumes a fraction of the power – in addition to this they are compact and elegant.

In addition to our interior and deck lights we also have a full range of Navigation lights for sail and powered vessels that shares the same characteristics as the interior and deck lights.

Read more about Lopolight at [www.lopolight.com](http://www.lopolight.com).

Now that you own a light that will last for many years we urge you to install it with great care, ensure that you use a good quality cable, and ensure that you connect it properly.

The Lopolight products are covered by a 5-year limited warranty.

Good luck and smooth sailing  
The Lopolight Team

Voltage: 10 – 32 volts  
Consumption: 2,4 Watt

The mechanical installation is as follows:

- Drill hole with diameter of 57 mm
- Connect the wires as mentioned above
